		<p>Sweden.</p> <ul style="list-style-type: none"><li>• [H4] In 1859 the book <i>On the Origin of Species by Means of Natural Selection, or the Preservation of Favoured Races in the Struggle for Life</i> was published in London. Never has a scientific publication revolutionized the scientific establishment in that degree.</li><li>• [H4] The author, Charles Darwin was born in Shrewsbury, England, in the year of 1809. At early age, he showed a keen interest in natural science, mainly geology and zoology. In 1831 he was given the opportunity to accompany the ship <i>The Beagle</i> on a five-year circumnavigation. The scientific research that the young Darwin made during that trip would much later prove to be of fundamental importance for his scientific theory.</li><li>• [H4] Inspired by economist Thomas Malthus' (1766-1834) ideas about population-growth, Darwin developed in the 1840's a theory of species destruction or alteration. Destruction or alteration would, according to these thoughts, depend on the individual's ability to survive in different environments with respect to individuals' different properties – the survival of the best adapted. The individual characteristics arose by chance while the environment decided which properties or individuals would survive and were able to have offsprings. After a long series of generations, new species or varieties could develop. The theory was launched in 1858 in the <i>Journal of the Proceedings of the Linnean Society</i>, and was developed in the mentioned book the following year.</li><li>• [H4] Darwin's theories on the origin of species caused a fierce debate, especially between science and the church. When Darwin published <i>The Descent of Man and Selection in Relation to Sex</i> in 1871, his theory of natural selection was already on its way to conquer the world of research.</li><li>• [H4] As an interesting fact, Darwin corresponded with both Charles John Andersson as his countryman Llewellyn Lloyd Vanersborg. In particular, he became interested in Lloyd's studies of the Swedish ornithology. In <i>The Descent of Man</i> Darwin has numerous references to Lloyd's works. Charles Darwin died in Downe, England, in 1882.</li><li>• [H4] Reference source Vänersborgs museum</li></ul>
